

## Tucson PMC's Request for Fall 2007 Seed Collections in Arizona

Our goal is to have as many collections made across each Major Land Resource Area in our service area as possible—from a variety of elevations and zones—to maximize each composite's regional adaptation. The map at the bottom of the page (generated from NOAA's website <http://www.hprcc.unl.edu/maps/current/>) illuminates areas that received greater than normal precipitation this summer, and will be useful to us for targeting our collections. It may also be of use to you. On the following pages you will find additional maps (made by PMC intern Heather Dial) of collections *already* made, to inform you where gaps exist in order to complete each composite. The sooner we fill the gaps the sooner they get to the field!

Percent of Normal Precipitation (%)  
7/1/2007 – 9/30/2007
